# *Compaq DECnet-Plus for OpenVMS Version 7.3*

**AV–PNHXT–TE**

March 2001

Dear Customer:

Thank you for purchasing Compaq DECnet-Plus networking software. The DECnet-Plus for OpenVMS software product (formerly named DECnet/OSI) is an implementation of Phase V of the DIGITAL Network Architecture (DNA) for the OpenVMS operating system hardware. DECnet-Plus networking software provides true network independence—you get the full functionality of DECnet Phase IV, as well as DECnet enhancements, plus full TCP/IP connectivity and OSI (Open Systems Interconnection) functionality.

For a complete description of this product, see the Compaq DECnet-Plus for OpenVMS Version 7.3 Software Product Description (SPD) for either OpenVMS VAX or Alpha systems:

- VAX: SPD 25.03.45
- Alpha: SPD 50.45.14

Compaq recommends that you read the *DECnet-Plus Planning Guide* before you install this product. If you need assistance in planning and installation, contact your local Compaq office.

Version 7.3 of Compaq DECnet-Plus for OpenVMS software will be the last release available on TK50 tapes. Future releases will be available only on CD–ROM.

## Features

Compaq DECnet-Plus for OpenVMS Version 7.3 software provides a set of applications for use on OpenVMS systems. This release supports the latest release of the operating system, OpenVMS Version 7.3, and provides corrections for a number of problems from the previous version (DECnet-Plus for OpenVMS Version 7.2-1).

For complete information about the software functionality and features, see Chapter 2 of the *DECnet-Plus for OpenVMS Release Notes* manual for Version 7.3.

## Documentation Comments

Compaq prides itself on responding to customer needs. To continue serving you, we welcome your comments about any of the DECnet-Plus for OpenVMS documents. Please send us your comments through any of the following channels:
