COMPAQ

AV–R8JQB–TE

October 1999

Dear Compaq Data Cartridge Server Component customer:

Thank you for your recent purchase of Data Cartridge Server Component (DCSC) Version 3.2 software. DCSC is capable of operating in a mixed OpenVMS cluster environment. The kit you have just received includes both the OpenVMS VAX™ and OpenVMS Alpha™ versions of DCSC V3.2.

DCSC was previously named Digital Cartridge Server Component.

The DCSC documentation set, i.e. Installation Guide, System Manager's Guide, User's Guide, and Programmer's Reference Guide, is unchanged since the release of DCSC V3.0.

DCSC is Year 2000 Compliant.

DCSC V3.2 is supported on OpenVMS VAX™ V5.5-2, V6.2, V7.1, and V7.2 and on OpenVMS Alpha™ V6.2, V7.1, V7.2 and 7.2-1.

Through customer feedback and continuous improvements, the DCSC software gets better all the time. DCSC V3.2 has the following changes over Version 3.1 (3.1F):

- Support for OpenVMS 7.2 and 7.2-1
- Support for EV6 processor
- Support for up to 20 tape drives per panel
- Bug fixes since the last release

Please refer to the release notes for more details.

DCSC V3.2 will be the last version that supports OpenVMS V5.5-2. DCSC V3.2 will not be supplied on either 9-track tape or TK50 tape. If this causes you concern please send email to the product manager.

Once again, thank you for your purchase of this product.

Sincerely,

Bryan Cox
Product Manager
