VAX Message Router VMSmail Gateway, Version 3.5

Cover Letter

AV-Q2ENC-TE

This Cover Letter lists the new features that have been introduced in Version 3.5 of the Message Router VMSmail Gateway.

It also describes how to install Version 3.5 of the Message Router VMSmail Gateway. Details of these changes are given in the Release Notes and the Installation Guide.

New Features

- Message Router VMSmail Gateway V3.5 is Year 2000 Ready. It will be unaffected by the rollover caused by the turn of the century.
- The following address for Reader's comments as documented in the books is no longer relevant:
  - Internet : migbooks@reo.mts.dec.com
  - X.400 : S=migbooks; O=digital; OU1=reo; P=digital; A=gold 400; C=gb

  Any comments on documentation should be directed to the local customer support centres **or** if the readers have some comments to send they should use the prepaid readers' comments forms, if they are supplied at the back of the book. In all cases, please include the part number of the appropriate guide when providing comments.
- This version of Message Router VMSmail Gateway V3.5 follows V3.3A. Please note that there is no Version 3.4 available.

Installing the Gateway

Enter the following command to install Version 3.5 of the Gateway:

```
$ @SYS$UPDATE:VMSINSTAL MRGATE035 device OPTIONS N
```

where:

- *MRGATE035* is the identity of the product being installed.
- *device* is the name of the device where the distribution medium is to be mounted, for example, MTA0.
- *OPTIONS N* provides the option of reading or printing the online release notes.

The VMSINSTAL procedure then starts and proceeds as described in Section 3.2 of the *VAX Message Router VMSmail Gateway Installation Guide*.

Customers who have Message Router VMSmail Gateway V3.2 or later can upgrade to V3.5 directly. Customers who have earlier versions need to install at least V3.2 and then upgrade to V3.5.

VMSINSTAL asks you whether you have a Product Authorization Key (PAK) for V3.5. Answer **YES** if you have a License PAK for V3.2 or V3.3 of the Gateway, because V3.3A uses the same PAK as V3.2 and V3.3. If you have a License PAK for V3.2 or V3.3 of the Gateway, you do not need a new PAK for V3.5 of the Gateway.

However, if you have a Nonlicense PAK for V3.2 or V3.3 of the Gateway, you should update the PAK to allow you to run V3.35 of the Gateway. If you are not sure whether you have a License PAK or Nonlicense PAK, examine the Authorization Number data field on the PAK. If the second and third characters correspond to the list below, you have a Nonlicense PAK:

FT, IM, QM, RE, SI, SP, TC, TP, TS, WS
